Table 1. Codebook

Variable name	Variable definition and coding in the data set
gender	Gender. 0 = Male; 1 = Female
age	Age groups. 1 = 18-34; 2 = 35-54; 3 = 55-69; 4 = 70+
age_1	Age group 18-34. 1 = Yes; 0 = otherwise
education_rc	Education. 1 = Upper secondary education or lower 2 = Short/medium-cycle higher education; 3 = Long-cycle higher education
edu	Upper secondary education. 1 = Yes; 0 = otherwise
ideology	Ideology/political viewpoint. 1 = Right; 5 = Left
pubsector_pref	The public sector is best at providing public services? 1=Strongly disagree; 5=Strongly agree
treatment_groups	Experimental treatment groups. 1 = High warmth/unfavorable outcome; 2 = high warmth/favorable outcome 3 = low warmth/favorable outcome; 4 = low warmth/unfavorable outcome
of_treatment	Outcome favorability treatment. 0 = unfavorable condition; 1 = Favorable condition
warmth_treatment	Warmth treatment. 0 = low warmth condition; 1 = high warmth condition
trust_b	Trust the caseworker. 0 = No trust at all; 1 = Completely trust
trust_m	Trust the municipality. 0 = No trust at all; 1 = Completely trust
perc_favorability	Perceived favorability. 0 = Very unfavorable; 1 = Very favorable
perc_warmth	Additive index of overall perceived warmth. The index consists of perceived warmth, friendliness, and likability 0 = Low warmth; 1 = High warmth
perc_competence	Additive index of overall perceived competence. The index consists of perceived competence, intelligence, and capability 0 = Low competence; 1 = High competence
perc_fairness	Additive index of overall perceived fairness. The index consists of perceived fairness, neutrality, and unbiasedness 0 = Low fairness; 1 = High fairness
user	User of elderly care. 0 = No; 1 = Yes
attention	Attention to treatment. 0 = Did not correctly identify service area; 1 = Correctly identified service area
